

Compact water-air units

Neptus XP

Cooling capacity: 24,6 to 92,4 kW
Heating capacity: 27,9 to 109,8 kW

Easy wall installation for its **vertical orientation**

Personalised control in offices and shopping centres

Discreet solution in centralised units with **closed water loop**

Applicable in **geothermal** installations

Plug-fan with EC-HEE motor (optional)

DESCRIPTION

The **Series Neptus RXP - IXP** cooling units and heat pumps are compactly-constructed water/air units.

They are equipped with centrifugal fans, plates exchangers, hermetic scroll compressors and electronic control with microprocessors, components optimised for the R-410A refrigerant.

These units have been designed for the air conditioning of spaces. They are quick to install and operate reliably. A vast number of options meet numerous operating demands.

All units are charged with refrigerant and are tested at the factory, verifying the correct operation of all their components.

SERIES

Neptus RXP series

Compact vertical water-air **cooling** unit.

Neptus IXP series

Compact vertical **reversible** water-air **heat pump** unit.

RANGE

- RXP - IXP series: 1 cooling circuit, 1 compressor, 5 models: 90 / 100 / 120 / 160 / 182.
- RXP - IXP series: 1 cooling circuit, 2 compressors, 4 models: 200 / 240 / 320 / 360.

OPERATION LIMITS

Inlet air conditions		Cooling	Heating
Air inlet	Minimum	14°C WB	10°C
	Maximum	22°C WB	27°C
Water	Minimum	30°C ① ③	5°C ② ⑤
	Maximum	55°C ①	20°C ② ④

① Temperature of outlet water.

② Temperature of inlet water.

③ Operation up to 5°C in units with condensation pressure control (optional).

④ Operation up to 35°C in units with evaporation pressure control (optional).

⑤ Where there is risk of freezing of the plate exchanger will be required the use of glycol water.

WATER LOOP HEAT PUMP SYSTEMS

(WLHPS)

The topology of the installation is usually a closed loop in which water circulates by means of a circulation pump. This enables water to reach each zone and to supply the adequate temperature by exchanging energy.

This type of system is often used in multi-zone commercial buildings, being specially interesting in buildings that present zones with thermal inversion.

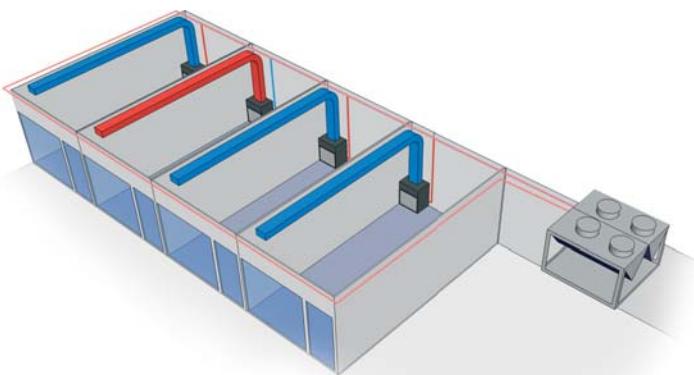

Only there will work the units of the spaces that demand it and with the function that is necessary, well with cooling, heating or ventilation. These will be the only units that will consume energy.

To maintain the conditions of the loop it is common to install units for heating the loop (boiler, air-water heat pump...) and cooling the loop (tower, dry-cooler, chiller...) in order to keep the water temperature between a few limits that allow water-air units to reach very high coefficients of performance and minimize the overall energy consumption of the buildings.

Common control of these systems is set to maintain an optimal water loop temperature. Water-air units in cooling mode will transfer energy to the loop and those in heating mode will evacuate energy. This will allow that sometimes both effects are balanced and produce temperature oscillation between the established limits, so the equipments to maintain the condition of the loop do not have to work. At this point also play an important role the existing inertia in the water loop.

If the temperature of the loop goes under 8°C-10°C the heat input elements (boiler, heat pump ...) will turn on. If the temperature raises over a temperature limit of 20-30°C, there will be activated the heat dissipation systems of the loop (refrigeration tower or others).

Also it is interesting to propose strategies of free cooling by means of the refrigeration tower and / or dry-cooler if the outdoor temperature is lower than the water loop temperature, when the cooling is the main demand.

GEOTHERMAL & HYDROTHERMAL ENERGIES

Convinced that the air-conditioning with low-enthalpy geothermal energy is an alternative source to the conventional, CIAT bets for this way of air conditioning. In this area, Neptus XP units are integrated in an optimal and simple way in all types of installations.

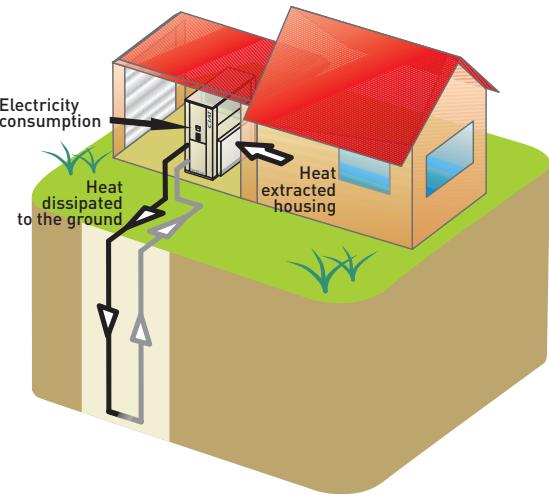

This option of great interest is in harnessing the energy of natural sinks (rivers, wells,...) using low temperature collectors or pumping from the water table:

- Open circuit (wells, rivers...).
- Horizontal geothermal exchangers in closed circuit.
- Vertical soundings geothermal exchangers in closed circuit.

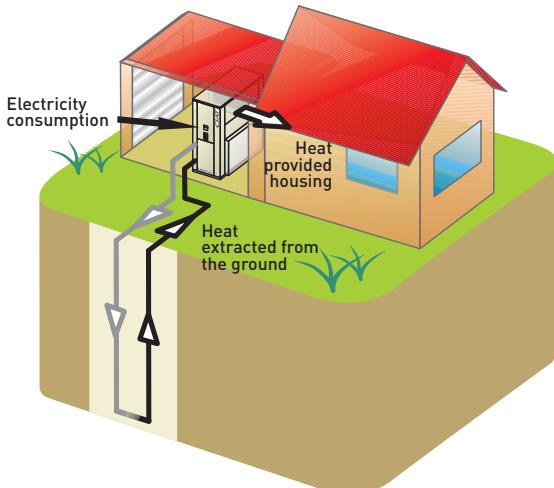

Water-air units can be connected with these systems using water as exchanged fluid. This means significant savings by not having to use other equipment to such order (dry-cooler, boiler, heat pump,...). And stable and moderate temperature of the ground allows units to operate with high seasonal energy efficiency.

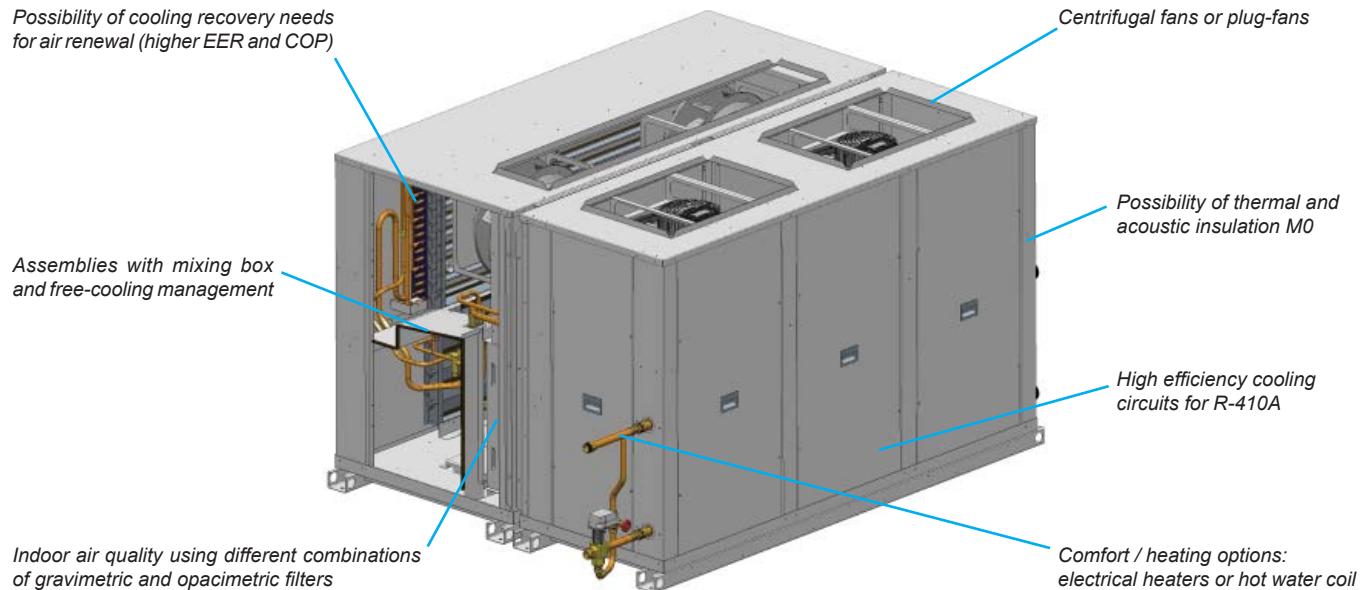

In heating mode the ground acts as heat focus, of which energy is removed. And in cooling mode the ground acts as an energy sink.

COOLING MODE

HEATING MODE

UNIT COMPONENTS

Casing

- Casing made of galvanised steel metal with polyester paint, oven-dried. Self-supporting frame.

Cooling circuit

- Hermetic scroll-type compressor(s) with sound insulation, assembled over antivibration mounts. Control of phase equilibrium and the direction of rotation.
- Crankcase heater.
- Thermostatic expansion valve with external equalisation.
- Four-way cycle reversing valve (heat pump units).
- Liquid receiver.
- Liquid sight glass.
- Anti-acid dehydrating filter(s).

Indoor circuit

- Centrifugal fan(s) coupling by pulleys and belts. Electric motor(s) with tensioner, class F, IP55 and internal thermal protection. Double-intake turbine(s), with an impeller with front-curved blades. Greased spherical bearings, with no maintenance required.
- Coil with copper pipes and aluminium fins.
- Reusable air filters, assembled on a frame.
- Condensates drain pan.

Outdoor circuit

- Welded stainless steel plate exchanger.

Protections

- High pressure pressostat.
- Low pressure pressostat.
- Compressor discharge temperature control.
- Non-return valve built into the compressor.
- Main door switch.
- Magnetothermic protection switches for the compressor(s) power line and fan motor.
- Automatic switch in the control circuit.
- Anti-freeze protection built into the control (heat pumps).
- Water flow switch (heat pump units).

Electric panel

- Complete and fully wired electrical panel. Insulated panel cover to prevent condensation.
- Protection IP55.
- Electrical power supply with neutral.
- Main ground connection.
- Compressor and fan motor contacts.

Electronic controls

AVANT / AVANT+ electronic control (standard)

This control is standard for all models (in the AVANT version).

Electronic module with microprocessor comprised of a control board and a user terminal TCO ensures the following functions:

- Selection of the operating mode:

- HEATING ☀
- COOLING ❄
- AUTO Auto
- DEHUMIDIFICATION 💧
- FAN (without icon).

- Modification of the setpoint.

- Permanent control of the operating parameters.

- View of the values measured by the probes.

- Timing of the compressors.

- Anti-fire safety.

- Control of the outlet temperature.

- Compressor discharge temperature control by probe.

- Compensation of the setpoint based on the outdoor temperature.

- Timer and weekly programming.

- Failure diagnosis and main alarm.

- Counters of the number of starts and operating hours of the unit's components.

Optional functions:

- Performance in all seasons via the condensation and evaporation pressure control with proportional 3-way valve.

- Control of the auxiliary electrical heaters.

- Proportional control of a hot water auxiliary coil.

- Control of electronic fans.

- Humidity control.

- Control of the opening of the outdoor air damper.

- Management of thermal free-cooling (with the AVANT & AVANT+ versions).

- Management of enthalpic or thermoenthalpic free-cooling (only with the AVANT+ version).

- Detection of clogged filters and management of air flow.

- Connection to a centralised technical management system (BMS) for supervision.

Optionally, this control can have a terminal for pGD1 maintenance that facilitates the initial scheduling of the unit, the modification of the operating parameters and the description of the alarms produced.

AVANT Pro electronic control (optional)

It is available for all the models of the Neptus XP series, being compulsory with the optional of cooling recovery.

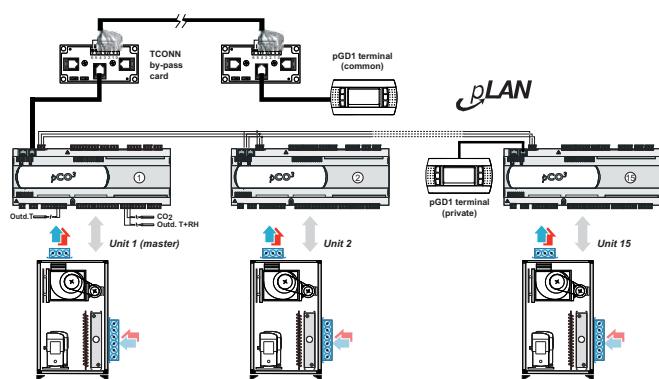

This electronic module with microprocessor comprised of a control board and a user terminal pGD1 ensures the following functions:

- Selection of the operating mode: COOLING / HEATING.
- Modification of the setpoint.
- Permanent control of the operating parameters.
- View of the values measured by the probes.
- Timing of the compressors.
- Anti-fire safety.
- Control of the outlet temperature.
- Compensation of the setpoint in accordance with the outdoor T.
- Daily and weekly programming.
- Failure diagnosis and main alarm.

Optional functions:

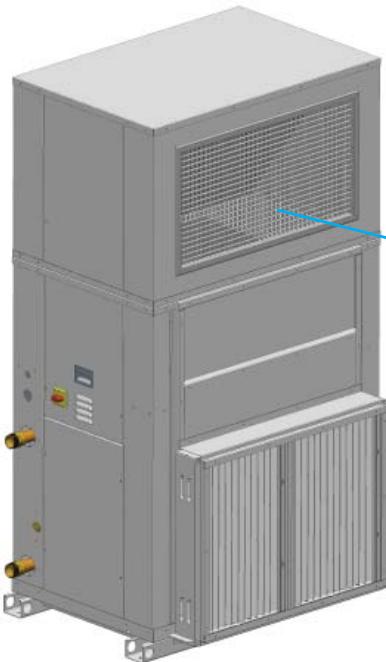

- Performance in all seasons via the condensation and evaporation pressure control with proportional 3-way valve.
- Control of the auxiliary electrical heaters.
- Proportional control of a hot water auxiliary coil.
- Management of the cooling recovery circuit.
- Control of electronic fans.
- Humidity control.
- Control of the opening of the outdoor air damper, depending on the mixing air temperature.
- Management of thermal, enthalpic or thermoenthalpic free-cooling.
- Management of clogged filters and control of air flow.
- Management of a smoke detecting station, a refrigerant leak detector and/or an energy meter.
- Control of the air quality probe.
- Connection to a centralised technical management system (BMS) for supervision.
- Connection to a local pLAN network thus allowing data and information communication for a maximum of 15 units.

Options

Configuration / installation options

- Side air outlet, M01 assembly.
- Different pressure and flow configurations.
- Outlet plenum.

Plenum with punched or double deflection grille, which allows air to be discharged through either side.

Double deflection grille

Note: Vertical discharge of the Neptus XP (M00 assembly) is mandatory with this plenum.

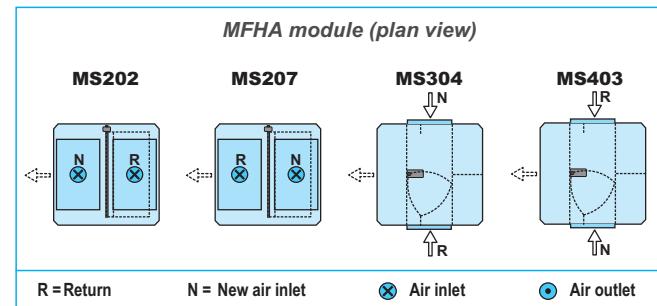

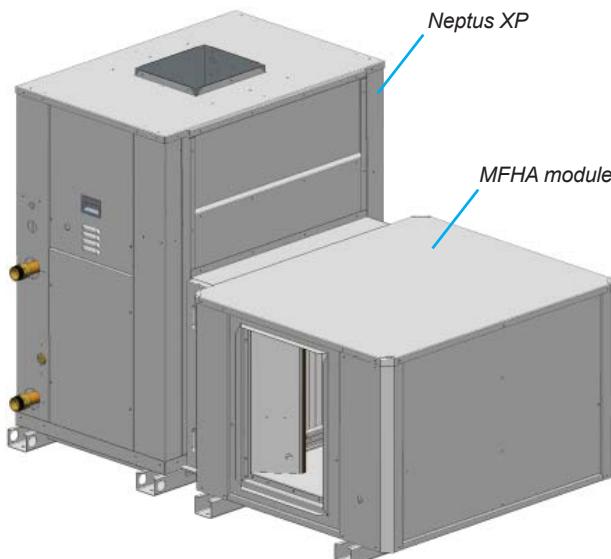

- Antivibration mounts made of rubber.
- Flexible hydraulic connections kit: 500 mm or 700 mm.

Mixing and free-cooling box (models 182 to 360)

Module independent from the unit, available in two configurations:

• Horizontal box (MFHA module):

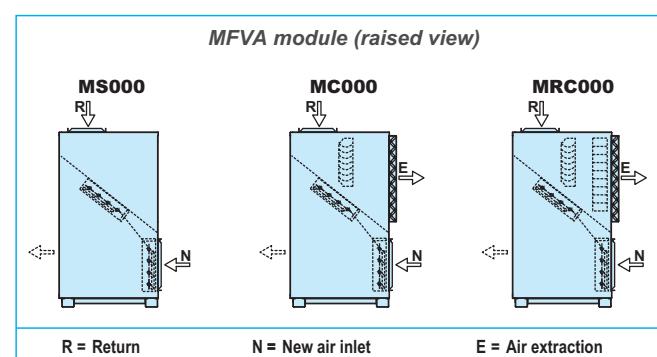

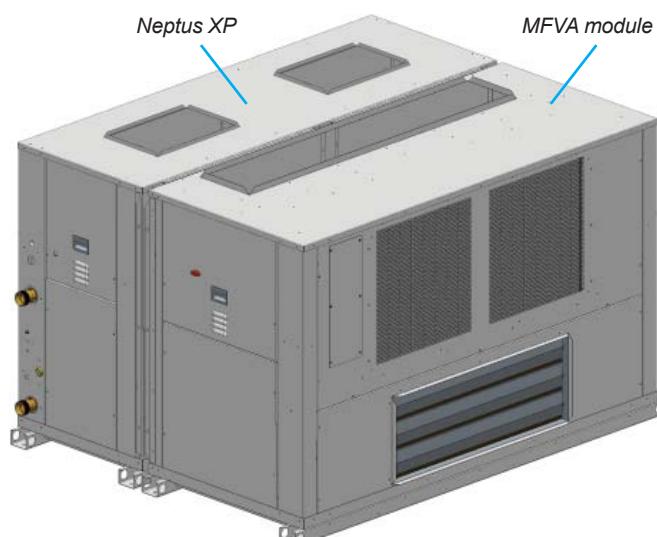

- 2 motorised dampers: Outdoor air intake with damper, interlocked with return damper.

• Vertical box (MFVA module):

- 2 motorised dampers: Outdoor air intake with damper, interlocked with return damper.
Module: MS000.
- 3 motorised dampers:
 - Centrifugal return fan.
Module: MC000
 - Centrifugal return fan and recovery circuit.
Module: MRC000

Note: Vertical discharge of the Neptus XP (M00 assembly) is mandatory with this box.

Energy saving / recovery options

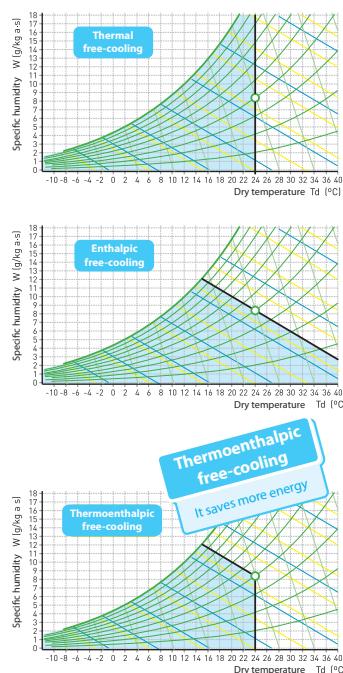

Free-cooling management

The operation of the unit in free-cooling allows the outdoor air conditions to be taken advantage of when these are more favourable than those of the return (or ambient) air. As such, this allows the cooling capacity to be reduced under these circumstances.

The percentage of air refreshing will range from 0% to 100%.

There are three options for the free-cooling management:

- Thermal, with comparison of temperatures.
- Enthalpic, with comparison of enthalpies.
- Thermoenthalpic, with comparison of enthalpies and a correction for temperature.

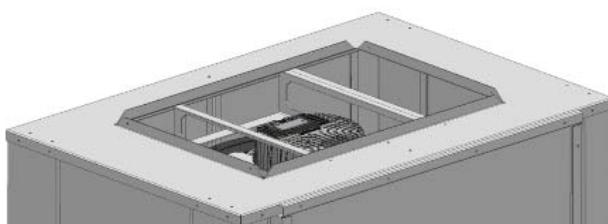

Plug-fan

- Electronic plug-fans in outlet and/or return with variable speed and flow sensor.

Facilities type of service industries consumption of fans associated with air transportation assumes a high % of the annual consumption of air conditioning. The use of fans of greater efficiency has a direct impact on the reduction of consumption.

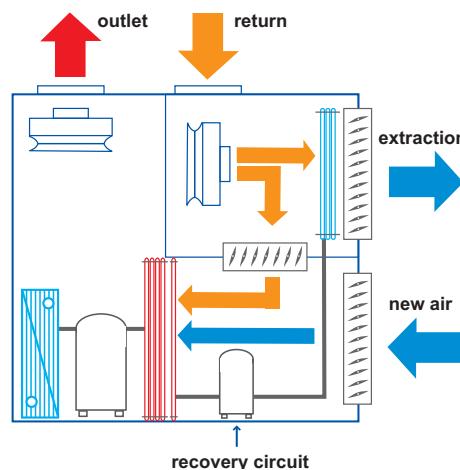

Plug-fans with variable speed have associated the following advantages:

- Elimination of friction loss of the transmission by direct link.
- Greater efficiency aerodynamics of the rotor (impeller jet with optimized profile), with very high available pressure.
- Greater efficiency of the motor, DC motors of permanent magnets powered by electronic switching integrated in the motor.
- Variable speed that allows to keep the outlet flow constant regardless of the degree of clogging of filters.
- Accurate measurement of flow, a section calibrated in the fan aspiration and a differential pressure sensor allow control handling flow reliably both on VAC as VAV systems.

Cooling recovery circuit (models 182 to 360)

- Circuit dedicated to recovery, with independent control, adapted to the air refreshing requirements in order to raise the COP and EER of the unit set. With this option it is obligatory to change the AVANT Pro electronic control.
- Centrifugal fan in vertical box with MRC000 assembly.
- Air circuit coil comprised with copper pipes and aluminium fins.
- Thermostatic expansion valve with external equalisation.
- Hermetic scroll-type compressor with sound insulation, assembled over antivibration mounts.
- Crankcase heater.
- Four-way cycle reversing valve (heat pump units).
- Anti-acid dehydrator.
- Condensates drain pan.

Safety options

- Soft starter of the outlet and/or return fan which prolongs the set time mainly aimed at installations with cloth ducts.
- Differential pressostat for the detection of clogged filters.
- Differential pressostat for control of air flow.
- Smoke detecting station in accordance with the NF S 61-961 standard (with AVANT Pro control).
- Refrigerant leak detector (with AVANT Pro control), please consult.

Electric panel options

- Transformer for power supply without neutral in electrical panel.
- Compressor soft starter.
- Energy meter for monitoring of the power consumption of the installation (with AVANT Pro control), please consult.

Outdoor ambient temperature options

Temperature

- Thermal and acoustic insulation 30 mm thick, with fire classification Euroclase A2-s1, d0.

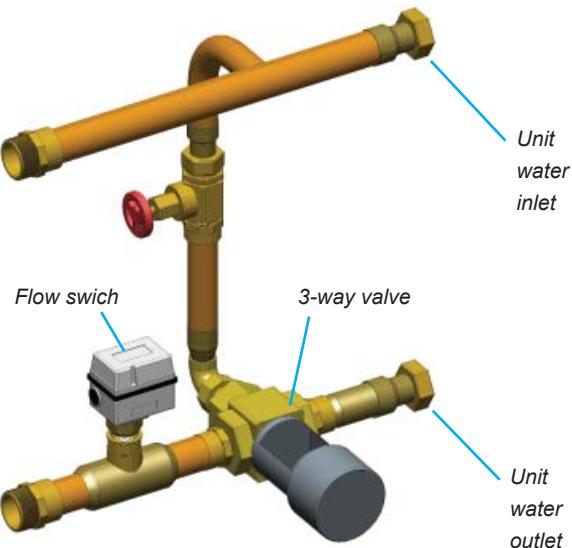

Cover loss:

Conditions	Winter	
Indoor	20°C	50% RH
Outdoor	-20°C	94% RH
9mm NBR (std)	1790 W	2.0% HC
30mm rock wool	726 W	0.7% HC

Conditions	Summer	
Indoor	27°C	50% RH
Outdoor	35°C	40% RH
9mm NBR (std)	615 W	1.00% TCC
30mm rock wool	249 W	0.45% TCC

- Performance in all seasons: condensation and evaporation pressure control with proportional 3-way valve that controls the water flow through the plate exchanger.

Humidity

- Tropicalised electric panel.
- Tropicalised motors and fans (please consult).

Corrosion

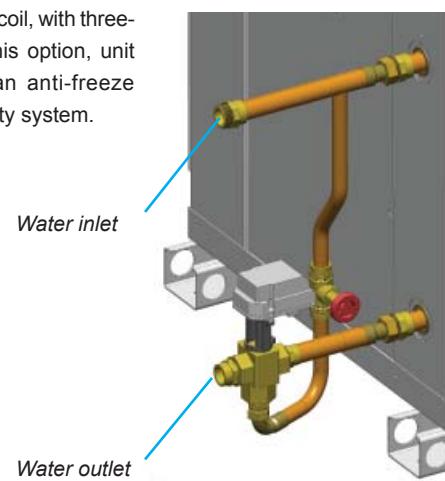

- Coils with copper pipes (indoor and/or auxiliary) and aluminium fins.
- Coils with copper pipes (indoor and /or auxiliary) and aluminium fins with polyurethane and blygold coating.

Comfort / heating options

- Auxiliary electrical heaters. With this option, the air flow controller is compulsory to be selected.

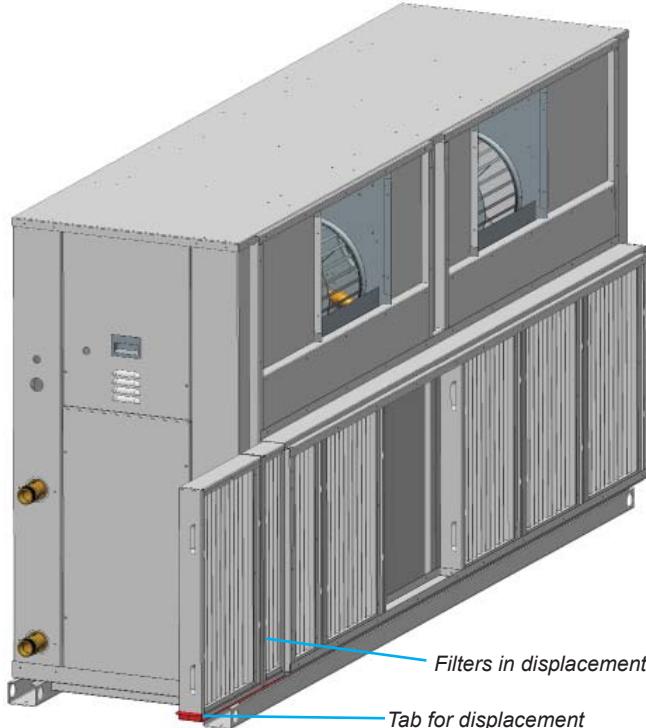

Nevertheless, if the unit with electrical heaters incorporates outlet plug-fan, it is not possible to select the optional the air flow controller, since the proper fan realizes this function.

- Hot water auxiliary coil, with three-way valve. With this option, unit can incorporate an anti-freeze thermostat as safety system.

Comfort / indoor air quality options

- Gravimetric filter G4.
- Gravimetric filter G4 + Opacimetric folded filters F6 to F9.
- Double stage creased opacimetric filters: F6 + F7, F6 + F8 or F7 + F9.

- Air quality probe for installation in the environment or in duct to enable measuring CO₂ and/or volatile compounds (with AVANT Pro control, instead of the mixing probe).

Duct probe

Ambient probe

Control / communication options

With AVANT / AVANT+ electronic control

The TCO user terminal is available in two configurations:

Terminal to fit

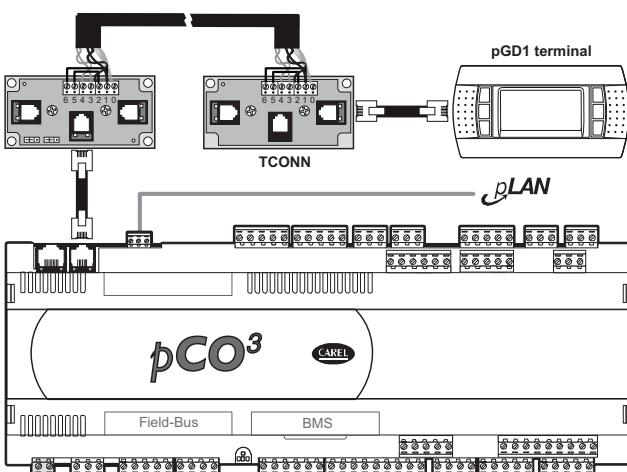

Surface terminal

- pGD1 terminal for maintaining of the unit.
- Return or ambient air temperature probe connected to the board that replaces the room probe of the thermostat TCO. This probe is required for fire safety.

With AVANT Pro electronic control

- Control without pGD1 terminal (for units with shared terminal).
- Kit remote control to 200 meters (pGD1 terminal + 2 TCONN bypass cards).
- Ambient air temperature probe.
- Ambient air enthalpy probe.
- Relative humidity probes of return and outdoor air: compulsory in units with enthalpic or thermoenthalpic free-cooling.

Communication

AVANT and AVANT Pro controls allow the connection to a centralised technical management system by using a specific BMS card for some of the following communication protocols:

- RS485 serial cards for network communication with protocols: Carel, Modbus, LonWorks®, BACnet™ MSTP, Konnex.
- Ethernet pCO Web card for network communication with protocols: Modbus TCP/IP, BACnet™ Ethernet, TCP/IP, SNMP V1-2-3, FTP and HTTP.

Supervision solutions

CIAT has developed different solutions of supervision according to the dimensions of the installation.

- **pCO Web**

It is the solution for the management and supervision of a single unit if it incorporates the Ethernet pCO Web card.

- **PlantWatchPRO**

It is a solution designed for the monitoring of installations of medium - small dimensions, with ability to manage up to 10 units. Suitable for technical environments, it has no parts in movement.

Includes: 5.7 " touch display, buzzer for notifications and 2 USB ports for downloading reports, charge devices models and applying service packs.

In this case, each unit needs one RS485 Carel / Modbus board.

- **PlantVisorPRO2**

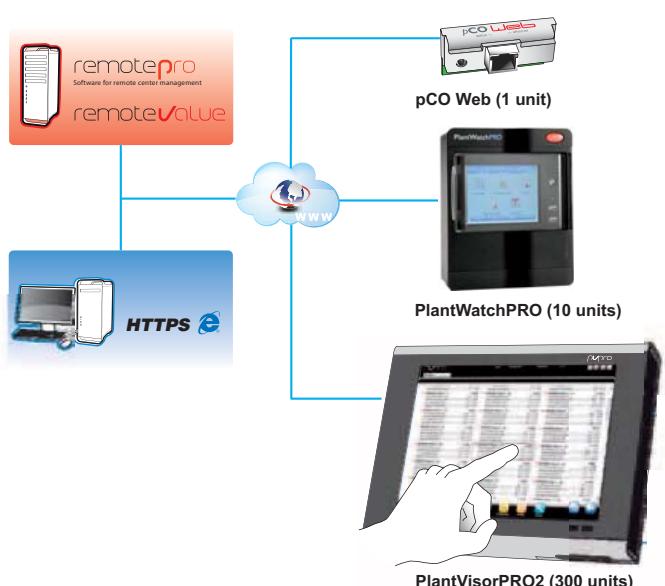

This is the solution for the management and supervision of air-conditioning installations with up to 300 units. It performs advanced monitoring and maintenance functions and enables creating areas and groups which simplify the management of the installation. It also allows the integration of energy meters for monitoring the power consumption of the installation.

PlantVisorPRO2 is available in two versions:

- **Box:** comprised of the CPU unit and, optionally, by monitor and keyboard.

- **Touch:** this includes the CPU and the touchscreen in the one device.

In this case, each unit needs one RS485 Carel / Modbus board.

These systems allow the installation in remote management. Through a single connection to the Internet is accessed the information system. The Web interface, which is available for the local user, allows the monitoring and the complete configuration of the installation: from the office or any other user's current location.

For remote control of multiple sites, there are dedicated tools for centralized management as **RemotePRO** and **RemoteValue**.

Compact water-air units

TECHNICAL CHARACTERISTICS

Neptus XP		90	100	120	160	182	200	240	320	360

① Cooling capacity calculated in accordance with the UNE-EN-14511 standard given for inlet/outlet water temperature conditions of 30/35°C and indoor air temperature of 27°C (19°C WB).

② Heating capacity calculated in accordance with the UNE-EN-14511 standard given for inlet water temperature conditions of 15°C and indoor temperature conditions of 20°C.

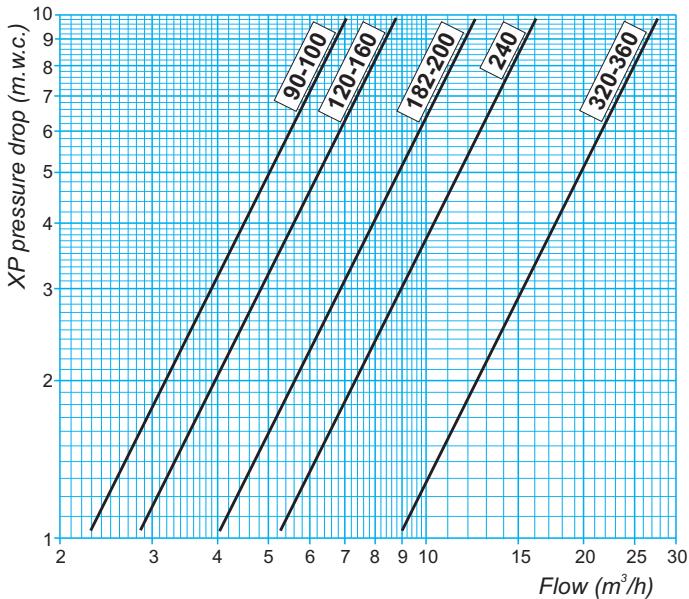

③ Total power input by compressor and motorised fans under nominal conditions, calculated in accordance with the UNE-EN-14511 standard.

④ Climatic warming potential of a kilogram of fluorinated greenhouse gas in relation to a kilogram of carbon dioxide over a period of 100 years.

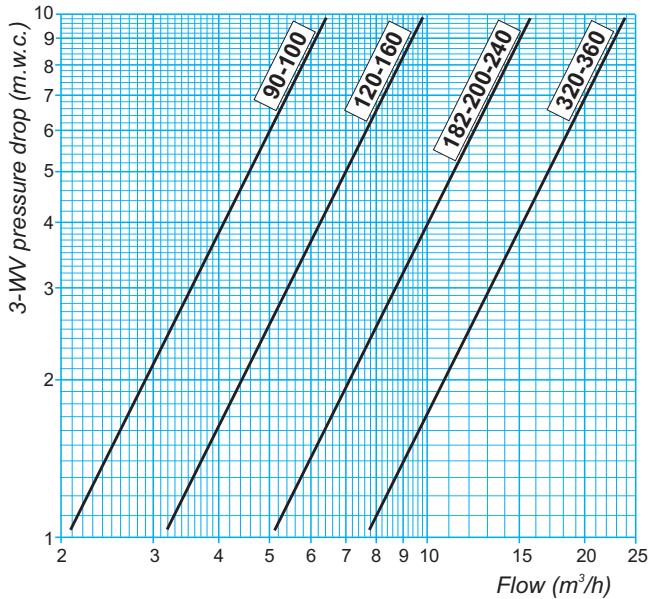

⑤ Upon request, it is possible to supply the frame of filters (146 mm) independently with the unit XP (713 mm), to be joined on site.

WATER PRESSURE DROP

■ Plate exchanger

■ 3-way valve (option)

SOUND POWER AND PRESSURE LEVEL

A) The **sound power level** in the **indoor fan outlet** must be taken into account for the silencer calculation:

Neptus XP	90	100	120	160	182	200	240	320	360
dB(A)	82,0	87,2	88,1	85,0	82,7	89,5	91,1	88,4	91,1

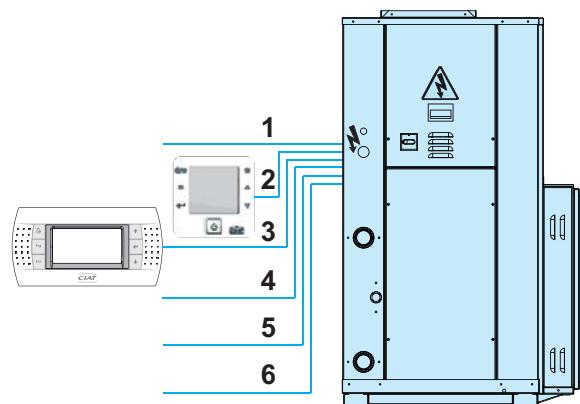

B) The **sound pressure level** of the unit, with the ducted return and discharge connections, measured at a distance of 5 metres, in open field, directivity at 2 and 1.5 metres from the ground is:

Neptus XP	90	100	120	160	182	200	240	320	360
dB(A)	54,7	56,3	58,0	57,6	59,6	58,7	60,7	60,7	64,0

Note: The sound pressure level depends on the installation conditions and, as such, it only indicated as a guide.

ELECTRICAL CONNECTIONS

No.	Neptus XP		90 to 360
1	Main power supply	400 III ($\pm 5\%$)	3 + N + GND
2	TCO user terminal connection	①	2 wires for supplying 230V + 1 shielded cable for communication, type AGW20/22 (1 twisted pair + drainwire + shielding)
3	pGD1 maintenance terminal connection (optional)		telephone cable 6 wires standard (RJ12 connector)
4	Remote off/on (optional)		2 wires
5	Main failure signal (optional)		2 wires
6	Safety electrical heaters (opt.)		2 wires (per stage)

① The same power supply used for powering the control board must also be used for powering the terminal.

Compact water-air units

OPTIONS FOR THE INDOOR CIRCUIT

■ Electrical heater

Auxiliary 2-stage electrical heaters for assembly and connection inside the unit, in one or two rows.

Important: if the unit has a centrifugal outlet fan (standard), it is mandatory that the air flow be controlled with the electrical heater.

Neptus XP		Total output (kW)	6	9	12	15	18	24	30
		Stage power (kW)	3 + 3	3 + 6	6 + 6	6 + 9	9 + 9	12 + 12	15 + 15
Current (A) (400V / IIIph / 50Hz)	90 / 100 / 120		8,7	13,0	17,3	unavailable			
	160		unavailable		17,3	21,7	26,0	unavailable	
	182 / 200 / 240 / 320 / 360		unavailable			21,7	26,0	34,6	43,3
Module weight (kg)			7,7	9,3	10,7	12,6	14,6	21,4	25,2

■ Auxiliary hot water coil

Hot water coil assembled inside the unit with a three-way valve managed by the unit control for back-up during heating in heat pump units.

In this case the air inlet temperature matches the air outlet temperature of the indoor coil (indoor coil outlet conditions for 20°C of air inlet, with water inlet temperature to the outdoor circuit of 15°C).

Neptus XP		90	100	120	160	182	200	240	320	360
Air pressure drop (mm.a.c.)		3,7	5,7	6,2	4,5	2,8	4,9	5,6	3,9	4,7
Water 80/60°C	Heating capacity (kW)	14,0	17,4	16,7	22,0	28,9	38,8	40,0	46,1	50,1
	Water flow (m³/h)	0,6	0,8	0,7	1,0	1,3	1,7	1,8	2,0	2,2

OPERATION WITH GLYCOL WATER

Where there is risk of freezing of the plate exchanger will be required the use of glycol water.

Correction coefficients (30% MEG)	Evaporator	Condenser
Output	0,98	0,98
Cold water flow	1,05	1,05
Water flow resistance	1,15	1,10
Average working conditions	15°C / 10°C	30°C / 35°C

Anti-freeze protection with glycol water: freezing point

Concentration %	0	10	20	30	40	50
Mono-ethylene glycol (MEG) °C	0	-3	-7	-13	-20	-29
Mono-propylene glycol (MPEG) °C	0	-2	-5	-10	-15	-21

CORROSION BEHAVIOUR

Corrosion problems may be present in the hydraulic circuit, and in particular the plates exchangers, if the characteristics of the water and its variations are not adequate.

It is recommended that the water filling the hydraulic circuits be filtered and treated, if necessary.

The units' hydraulic circuits are made of copper pipes. The exchanger plates are made of AISI-316 stainless steel, and the material used for soldering the plates is copper.

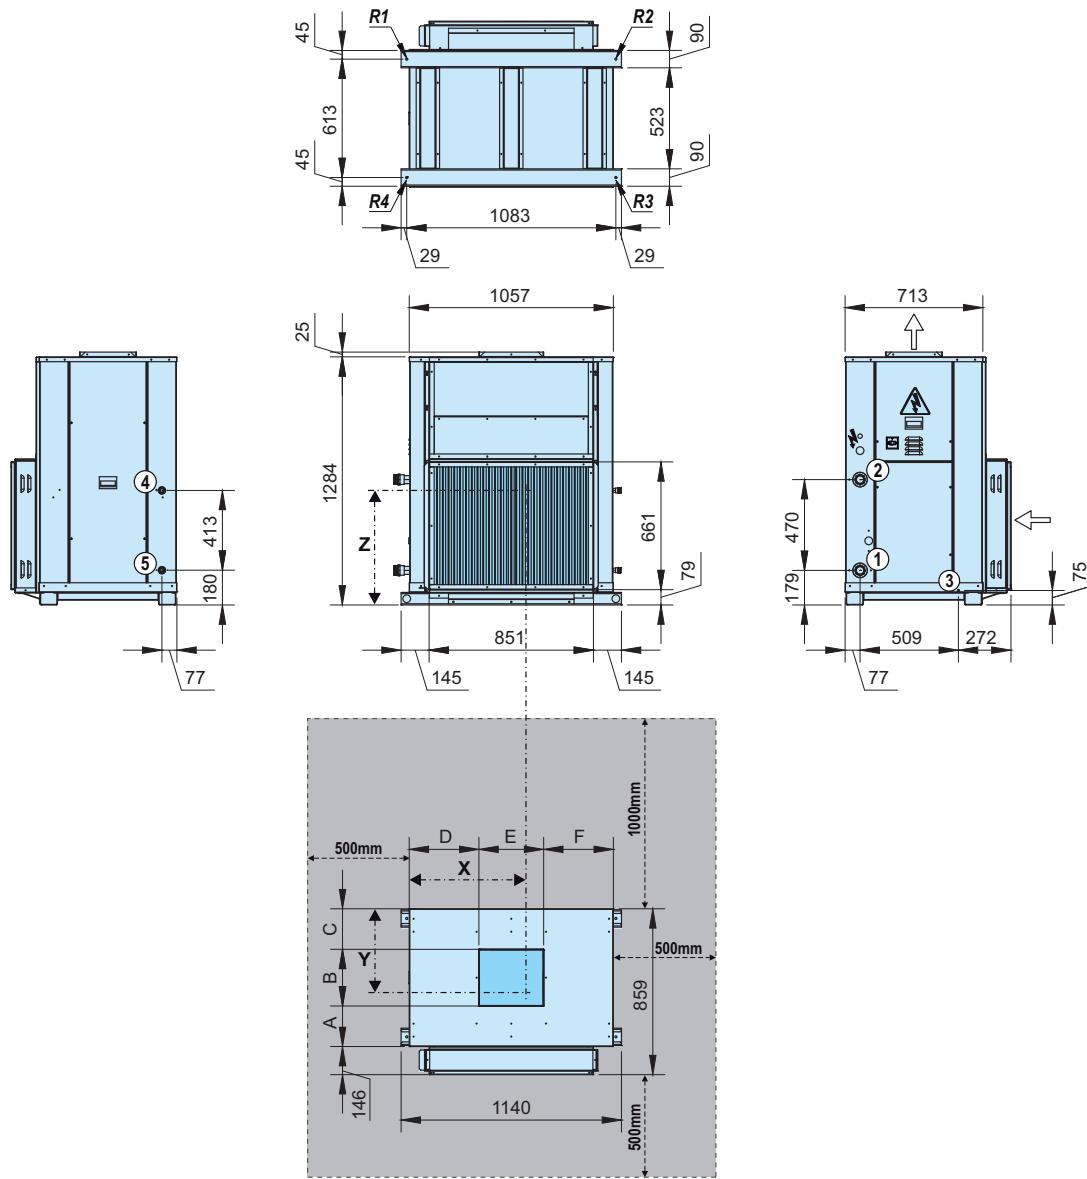

The following table indicates corrosion behaviour for copper and the AISI-316 stainless steel with regard to water with different compositions.

IMPORTANT: For open-circuit installations, if it is not possible to maintain the water conditions within the values indicated in the previous table, it will be necessary to install an exchanger that separates the unit's circuit from the water circuit to be treated by using materials compatible with these characteristics, whether stainless steel or titanium.

Water content	Concentration (mg/l)	AISI 316	Copper
Organic substances		+	0
Electrical conductivity	< 500 µS/cm	+	+
	> 500 µS/cm	+	-
NH ₃	< 2	+	+

DIMENSIONS SCHEMES

Outlet plenum for Neptus XP - 90, 100, 120 and 160 (mm) (optional)

Outlet plenum for Neptus XP - 182, 200, 240, 320 and 360 (mm) (optional)

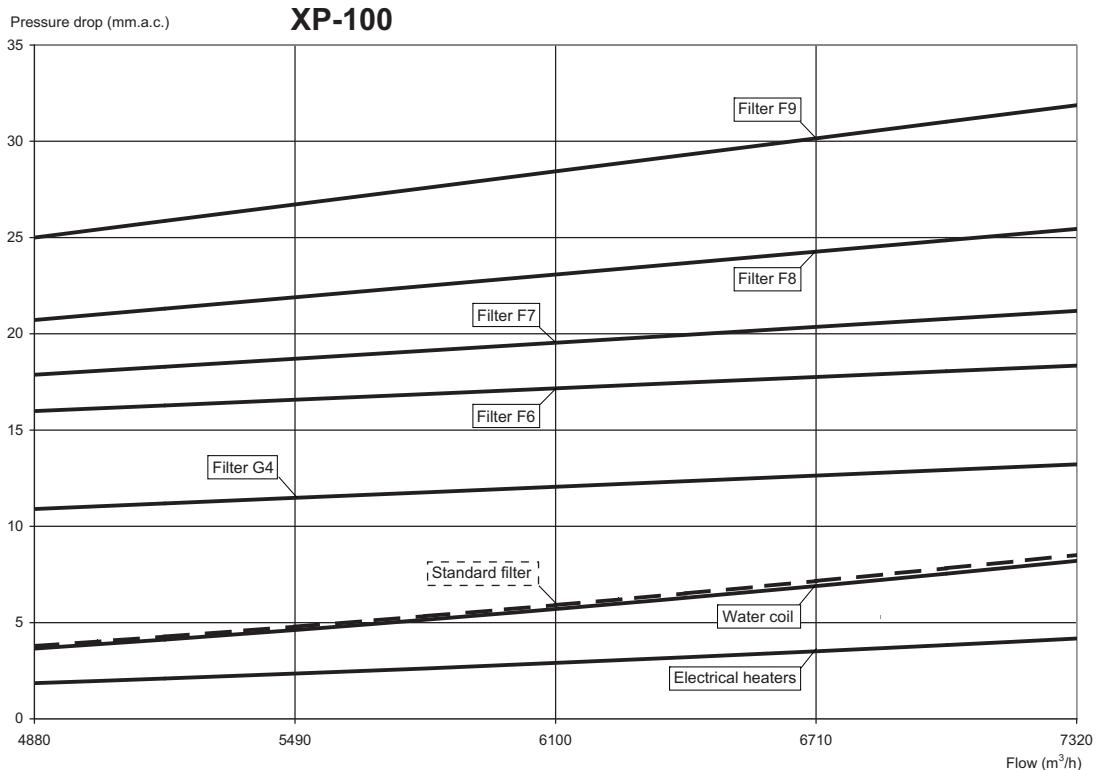

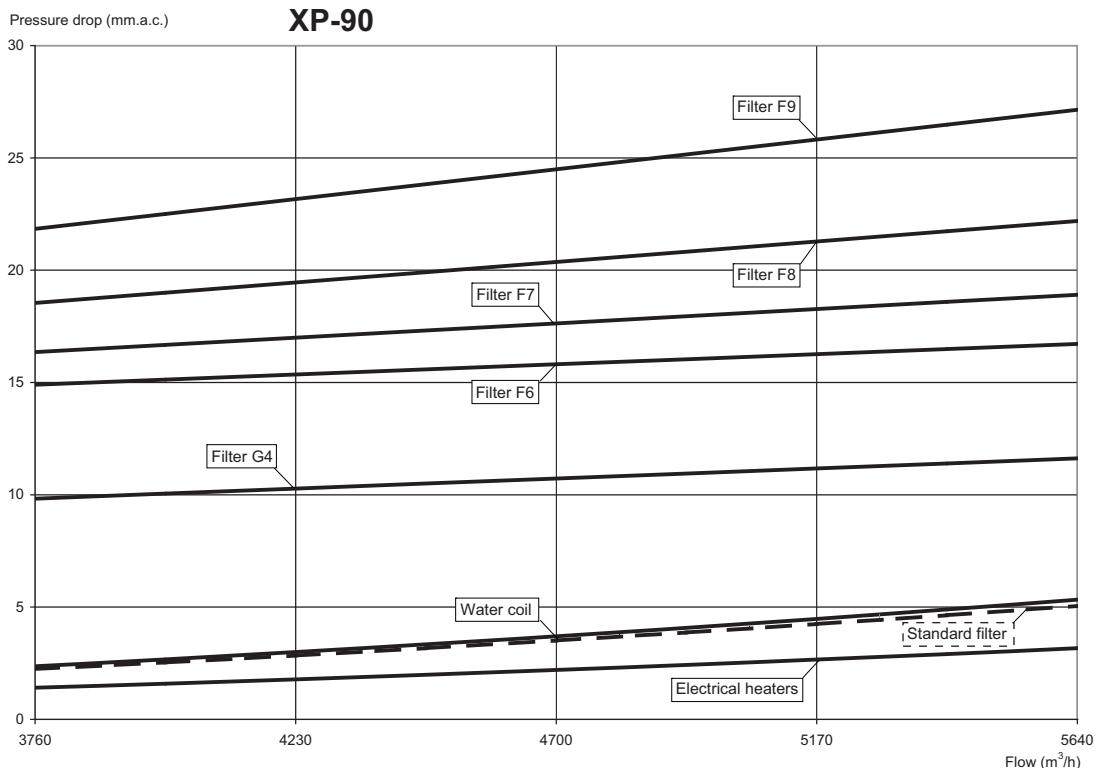

Neptus XP	Outdoor dimensions (mm)			Punched or double deflection grille (mm)			
	A	B	C	D	E	F	G
90 / 100 / 120	1057	720	655	107	440	121	815
160	1387	720	655	107	440	121	1145
182 / 200 / 240	2007	720	655	107	440	121	815
320 / 360	2647	720	655	107	440	121	1145

Note: plenum allows air to be discharged through either side.

PRESSURE DROPS

■ Outlet pressure drops in the available options

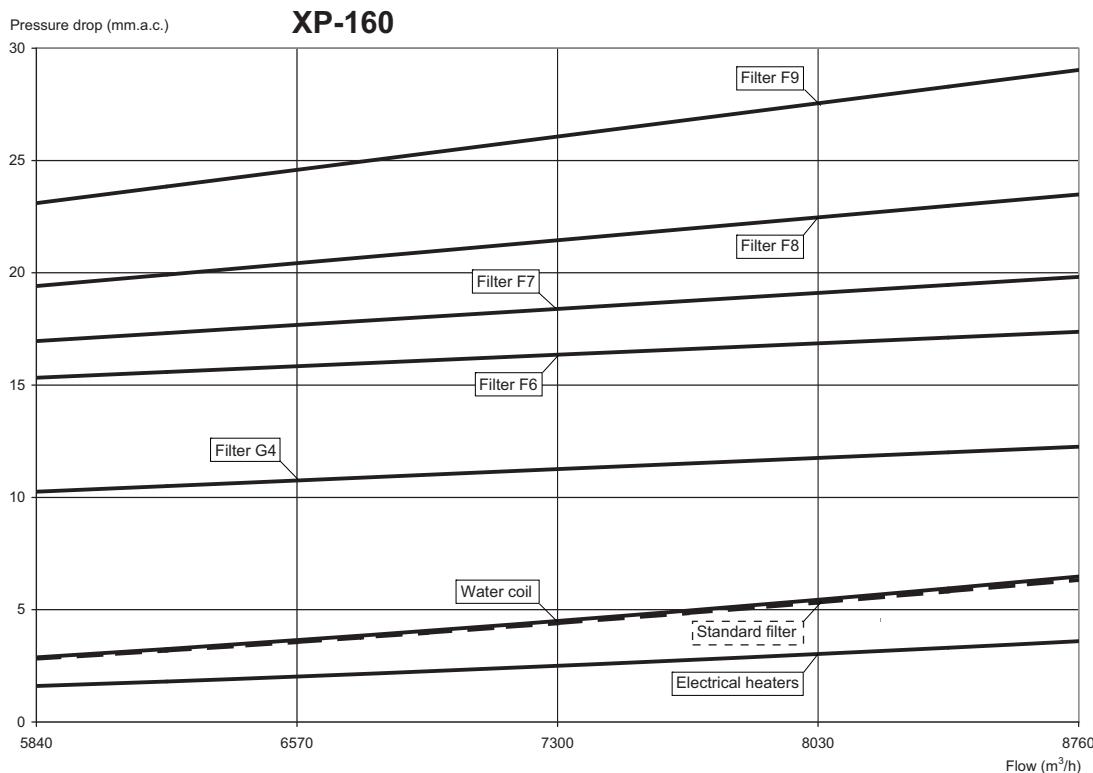

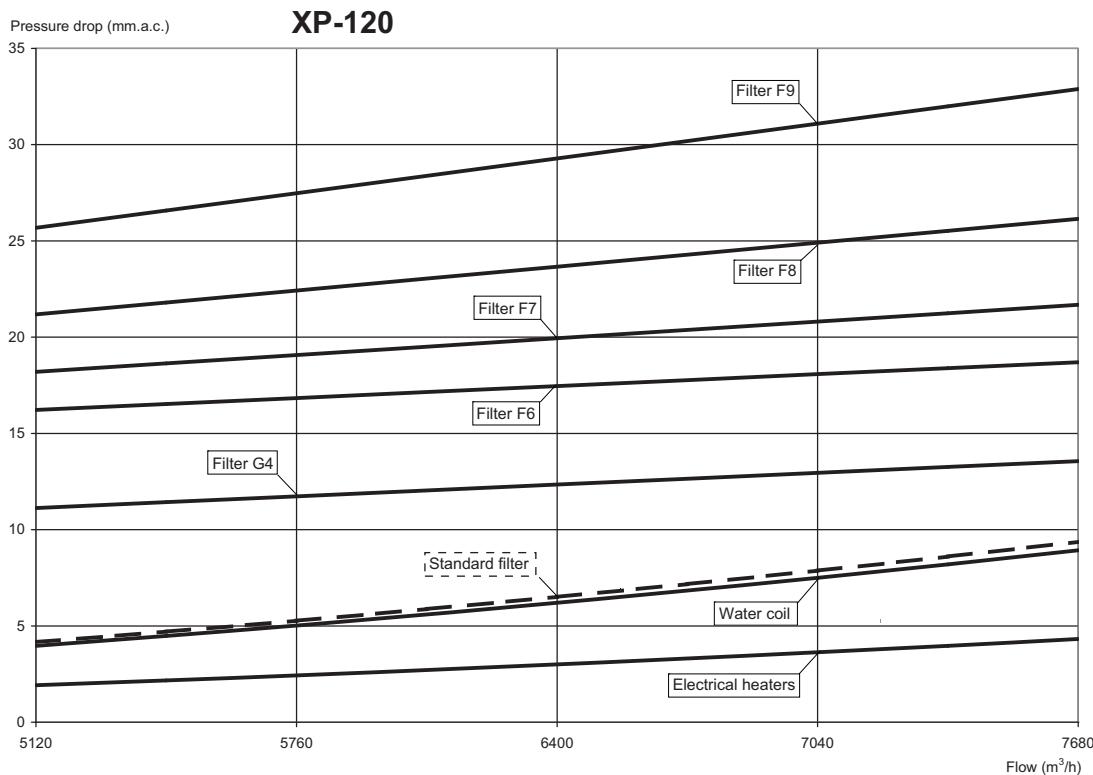

When changing filters, take away the pressure drop from the standard filter.

Based on the losses supported by the options selected, verify if it is necessary to change to outlet plug-fan.

Note: Pressure drops in the filters have been calculated for an average level of clogging.

PRESSURE DROPS

■ Outlet pressure drops in the available options

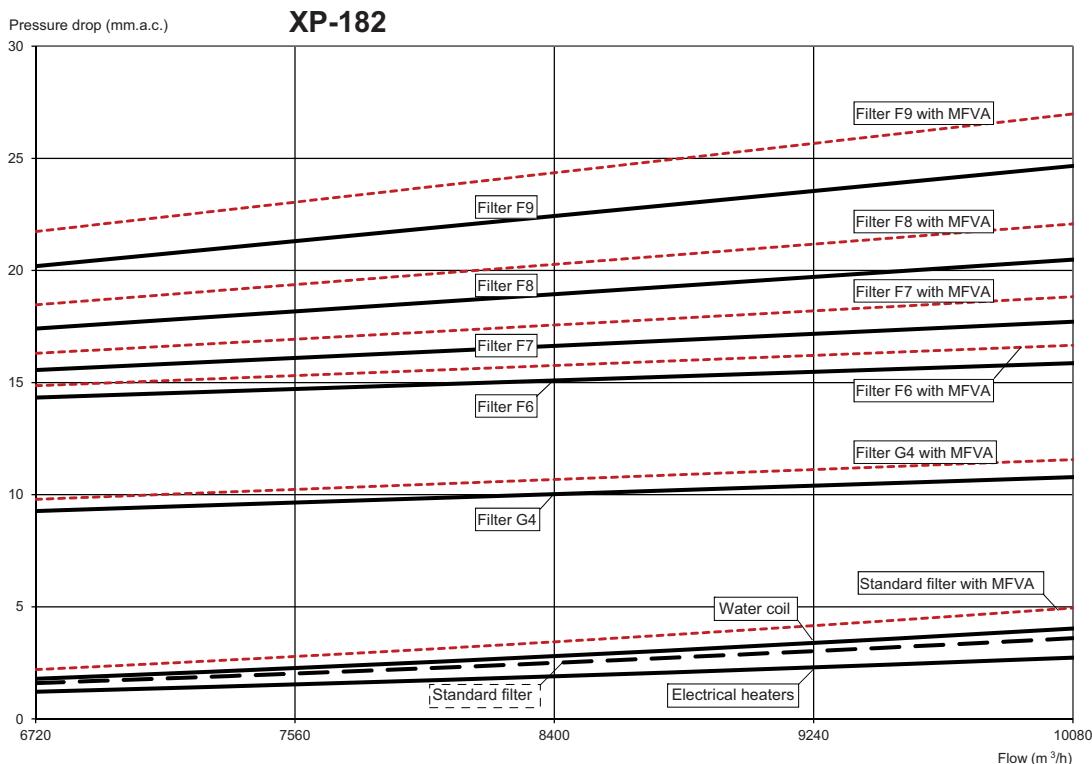

When changing filters, take away the pressure drop from the standard filter.

Based on the losses supported by the options selected, verify if it is necessary to change to outlet plug-fan.

Note: Pressure drops in the filters have been calculated for an average level of clogging.
